GEOCHIMICA ET COSMOCHIMICA ACTA

EXECUTIVE EDITORS

PROF. C. W. CORRENS *Sedimentpetrographisches Institut der Universität, Lotzestr.* 13, *Göttingen, Germany*
PROF. E. INGERSON *Department of Geology, University of Texas, Austin* 12, *Texas, U.S.A.*
PROF. L. R. WAGER, F.R.S. *Department of Geology and Mineralogy, The University Museum, Oxford, England*

EDITORS

PROF. L. H. AHRENS *Department of Chemistry, University of Capetown, Rondebosch, Cape Province, South Africa*
DR. S. R. NOCKOLDS *Department of Mineralogy and Petrology, The University, Cambridge, England*
PROF. H. C. UREY, For. Mem. R. S. *University of California, La Jolla, California, U.S.A.*
DR. JOHN VERHOOGEN *Department of Geology, University of California, Berkeley, California, U.S.A.*
PROF. A. P. VINOGRADOV *Vernadsky Institute, Moscow, U.S.S.R.*
PROF. W. A. WAHL, *Observatoriegaten* 8, *Helsingfors, Finland*

INFORMATION FOR CONTRIBUTORS

I. GENERAL

1. Papers on *geochemistry* should be submitted to the appropriate Executive Editor—Prof. L. R. WAGER for papers from the United Kingdom and British Commonwealth, and for papers in English from Europe; Prof. C. W. CORRENS for papers in German or French; Prof. E. INGERSON for papers from the American continents. Papers on cosmochemistry should be sent to Prof. W. A. WAHL. Papers submitted for publication will naturally be judged from the standpoint of scientific originality and novelty. Technical details of apparatus used in scientific investigation can, however, be presented in brief notes. Critical comments or preliminary results requiring early publication should be submitted as letters to the editors. Where possible, letters should be confined to 500 words. The preparation of progress reports and review articles will be invited by the editors from time to time. The journal appears as independent and complete numbers, which are combined into volumes of about 300 pages.

2. Only papers which have not been previously published can be accepted. Authors must agree not to publish elsewhere a paper submitted to and accepted by *Geochimica et Cosmochimica Acta*.

3. Fifty reprints of each paper are provided free. Additional copies can be purchased if ordered at the time the first proofs are returned. A reprint order form will accompany first proofs.

II. SCRIPT REQUIREMENTS

1. Scripts must be written in one of the three official languages—English, French or German.

2. The script should be typed (not a carbon copy). The text must be ready for printing and should be carefully checked for errors. Authors will receive proofs for correction.

3. Illustrations should accompany the script, mounted on separate sheets. Line diagrams that require to be redrawn should include all relevant details. Half-tone illustrations should be restricted to the minimum necessary. Photographs should be enlarged sufficiently to permit their clear reproduction, and if words or numbers appear on them, two copies should be sent, one clearly printed and the other without inscription. All illustrations should be provided with descriptive legends, which should be given on a separate sheet. Any lettering on diagrams—other than Greek letters, symbols, etc.—should be stencilled and should be sufficiently large and bold to permit reproduction when the diagram has been reduced to a size suitable for inclusion in the journal.

4. References in the text should be given by quoting the author's name and year of publication, i.e. AHRENS (1952). **Full references should be listed at the end of each paper, in alphabetical order, in the following manner:**

AHRENS, L. H. (1952) The use of ionization potentials—I. Ionic radii of the elements. *Geochim. et Cosmochim. Acta* **2**, 155–169.

and should include the full title of the article, standard abbreviated title of the journal, year, volume number and inclusive page numbers.

5. The text of articles submitted should be concise and in a readily understandable style. The technical description of the methods used should only be given in detail when such methods are new. The essential contents of each paper should be briefly recapitulated in an abstract in English. Such an abstract may, however, be submitted by the author in the language of the original typescript for translation into English by the editorial staff.

6. To conserve space, authors are requested to mark less important portions of the paper (such as description of methods, record of experimental results, etc.) for printing in smaller type.

7. Indices of refraction should be denoted by the symbols α, β, γ, ω, ε, n and vibration directions by X, Y, Z, O and E.

PERGAMON PRESS, INC.

122 EAST 55TH STREET, NEW YORK 22, N.Y. 4 & 5 FITZROY SQUARE, LONDON W.1

CONTENTS

VOL. 18, NOS. 1/2

W. COMPSTON: The carbon isotopic compositions of certain marine invertebrates and coals from the Australian Permian 1

N. YAMAGATA, Y. MURAKAMI and T. TORII: Biogeochemical investigation in serpentine–chromite ore district 23

U. SCHINDEWOLF and M. WAHLGREN: The rhodium, silver and indium content of some chondritic meteorites 36

C. E. ADAMS, N. H. FARLOW and W. R. SCHELL: The compositions, structures and origins of radioactive fall-out particles 42

E-AN ZEN: Carbonate equilibria in the open ocean and their bearing on the interpretation of ancient carbonate rocks 57

H. FECHTIG, W. GENTNER und G. KISTNER: Räumliche Verteilung der Edelgasisotope im Eisenmeteoriten Treysa 72

A. P. TUDGE: A method of analysis of oxygen isotopes in orthophosphate—its use in the measurement of paleotemperatures 81

M. S. CROWLEY and R. ROY: The effect of formation pressures on sheet structures—a possible case of Al-Si ordering 94

G. L. BATE, H. A. POTRATZ and J. R. HUIZENGA: Scandium, chromium and europium in stone meteorites by simultaneous neutron activation analysis 101

J. R. MERRILL, E. F. X. LYDEN, M. HONDA and J. R. ARNOLD: The sedimentary geochemistry of the beryllium isotopes 108

E. A. VINCENT and J. H. CROCKET: Studies in the geochemistry of gold—I. The distribution of gold in rocks and minerals of the Skaergaard intrusion, East Greenland 130

E. A. VINCENT and J. H. CROCKET: Studies in the geochemistry of gold—II. The gold content of some basic and ultrabasic rocks and stone meteorites 143

Letter to the Editor:

D. M. KEMP and A. A. SMALES: Neutron activation results for vanadium and scandium in G-1 and W-1 149

Geochemical Note:

H. C. UREY: On the chemical evolution and densities of the planets . 151

Book Review:

The Planet Earth, Edited by D. R. BATES. (Reviewed by H. HUGHES) . 154

Errata 155

Papers to be published in future issues 156

R. E. MARINGER and G. K. MANNING: Aerodynamic heating of the Grant meteorite 157

R. R. BROOKS, L. H. AHRENS and S. R. TAYLOR: The determination of trace elements in silicate rocks by a combined spectrochemical–anion exchange technique 162

F. A. PANETH: The discovery and earliest reproductions of the Widmanstätten figures 176

E. L. FIREMAN and J. DEFELICE: Argon-39 and tritium in meteorites . 183

P. E. BROWN and B. J. RUSHTON: Some chemical data on the Mourne Mountain granite G2 193

K. H. WEDEPOHL: Spurenanalytische Untersuchungen an Tiefseetonen aus dem Atlantik. Ein Beitrag zur Deutung der geochemischen Sonderstellung von pelagischen Tonen 200

H. HAMAGUCHI, R. KURODA and H. ISHIKAWA: The distribution of minor elements in the rocks of Sakura-jima volcano 232

P. M. HURLEY, H. W. FAIRBAIRN, W. H. PINSON and G. FAURE: K–A and Rb–Sr minimum ages for the Pennsylvanian Section in the Narragansett Basin 247

K. KREJCI-GRAF und F. E. WICKMAN: Ein geochemisches Profil durch den Lias alpha (zur Frage der Entstehung des Erdöls) 259

A. T. WILSON and G. J. FERGUSSON: Origin of terrestrial tritium . . 273

A. P. VINOGRADOV, E. I. DONTSOVA and M. S. CHUPAKHIN: Isotopic ratios of oxygen in meteorites and igneous rocks 278

H. G. F. WINKLER and H. von PLATEN: Experimentelle Gesteins-metamorphose—III. Anatektische Ultrametamorphose kalkhaltiger Tone . . 294
